

Abstract Of The Disclosure

A method and apparatus for infusing fluid into a large animal. The infusion pump comprises an electric pump unit and a catheter. The catheter is in fluid communication with the pump unit and adapted for insertion into a fluid passageway of the animal. The pump unit is adapted to pump at least five hundred milliliters of fluid through the catheter and into the animal in one minute at a flow rate of at least five hundred milliliters per minute. The infusion pump can be packaged with a manual to make a kit. The manual provides instructions for use of the infusion pump to infuse fluid into an animal.
